Deliverable - Week 9

Resource Planning

Dear Team,

Your weekly requirement for the group project is the following:

1. Identify and list all the resources required for your project (e.g. People, Materials and Equipment);

2. Identify whether your project is time-constrained or resource-constrained and explain why?

3. Create a Resource Loading Schedule for your project;

4. Update your project network diagram based on the resource constraints of your project?

5. Create a Time-Phased budget for your project. What is your project budget?

6. Present a Gantt Chart for your project. What is the new duration of your project?

<u>Hints</u>

    a. When developing your resource loading schedule be sure to use the appropriate resource allocation method.

When creating the time-phased budget ensure that you review each of your work packages to ensure that they are also time-phased.
